WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Lower tube: 32 x 3 fibreglass, 1000 long; one 10.5 hole across, 50 below its top

Upper tube: 25.4 x 3.2 fibreglass, 1100 long; it slides inside the lower tube

(0.3 clearance each side); sixteen 10.5 holes, 50 apart, the first 150 up

from its bottom end; all holes in one line, square to the tube

Slot across the top of the upper tube: 12.5 wide, 60 deep (as the socket slots)

Fork plate: 12 HDPE, 100 wide; notch 50 wide, round bottom R25, 30 above the

tube top; tongue 25.4 wide, 60 long into the slot; round all edges

Two nylon M8 bolts through tube and tongue, 15 and 45 below the tube top

Rubber foot cap; red band 850 to 900 up from the foot; hold below the band

Notch height 1.19 to 1.94 m in 50 steps; 1.24 m long when closed

Seal cut ends and hole bores with epoxy; no metal anywhere in the prop

Check: upper tube slides freely; the pin goes through at every hole

BREAKHOOK
