WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

- Cut 180 long from 50.8 x 2.0 welded steel tube; square the ends
- Slot one end across a diameter: two slots 10.5 wide, 50 deep, top and bottom
- Mark the slots with a strip of paper round the tube so they line up
- Cut with a hacksaw or thin cutting disc; file to 10.5, square at the root
- Deburr the bore at the open end and break its edge 1 x 45 deg
- The bore is 46.8: the 44.5 pole slides in with 1.15 clearance each side
- The pole goes in 130 and stops against the end of the plate
- Fits: the plate slides into both slots with no more than 0.5 total play
- Check: a 300 offcut of pole tube slides in and out by hand
