

REV	DESCRIPTION	DATE	BY
P1	Making sketch for the prototype build plan	2026-10-03	AC

WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Upright: 40 x 6 flat bar, 800 long; two 11 holes 50 and 750 up for M10 anchors

Arms: two pieces 250 long, welded square to the front face, tops 256 and 506 up

Lips: 30 tall, welded on the arm ends so poles cannot roll off

Rope peg: 380 long at 700 up with a 40 tall lip; the coil hangs clear of the arms below it

Weld all round each arm root (5 fillet); grind smooth; prime and paint

Two uprights 1200 apart on a wall, out of the sun and rain where possible

Each arm holds four poles 56 apart; sleeves go at alternate ends

Check: arms level and square to the wall; a 10 kg load leaves no movement
